

## Natchez 2.0mm SPC Maintenance & Care Instructions

**Precautions:** Remove all metal objects before wetting the flooring and prohibit foot traffic until the floor is dry. Use any cleaning machines, following its usage and safety instructions.

Do not use dust mops treated with oils or silicones, acetone, strong alkaline cleaning agents, multi-surface cleaners, vinegar/ammonia/ citrus oil solutions, scouring powder, strong solvents, or abrasive cleaning pads, as these can damage the flooring. The application of a floor-finish is not usually recommended and will change the maintenance protocol.

**Regular Cleaning:** Dust-mop or vacuum (without a beater bar) the floor to remove any dirt or grit. Damp-mop the floor as often as required using a flat microfiber mop or a Swiffer type with water or a suitable diluted vinyl floor cleaning solution (neutral pH), changing the pad as often as required.

**Deep Cleaning:** This may be required when routine cleaning is not meeting expectations. Dust-mop or vacuum the floor to remove dirt or grit. Wet mop the entire floor using a suitable neutral pH cleaning solution. Allow the solution a dwell time of approximately 5-10 minutes. Scrub the floor using a soft nylon broom and wet vacuum may be used to remove the slurry.
